

GOLDMANN'S GAMBIT

STUDY GUIDE

INGENIUM

INTRODUCTION

Goldmann's Gambit puts participants at the frontier of the scientific discovery through a research-driven trading simulation. Teams trade stocks of 10-11 public limited companies within a fictional country, making strategic calls based on real-time updates grounded in real-world science.

CATEGORY FORMAT

Stimulation Platform

- Each team receives private login credentials - do not share with other teams.
- Portfolios are accessed individually through the digital platform.
- All trading activity is monitored and tracked.

Market Structure

10-11 public limited companies at the outset, each with a detailed backstory, R&D history, and current market position. New companies are introduced as the competition progresses, expanding the market with fresh listings.

TRADING MECHANISM

Daily Updates

- 8-10 administrative updates released each day.
- Prices move on scientific breakthroughs, research setbacks, and industry developments modeled on real-world science.
- Updates cover experimental results, funding rounds, regulatory decisions, and company news.
- At least one new stock enters the market daily.

Trading Options

- **BUY** - purchase additional shares.
- **SELL** - liquidate existing holdings.
- **HOLD** - take no action .

KEY SKILLS REQUIRED

Analysis

- **Fundamental Analysis** - evaluating a company's scientific credibility and growth prospects.
- **Market interpretation** - reading research updates and industry indicators.
- **Strategic Planning** - diversification and risk management.

Decision Making

- **Real-time Adaption** - responding quickly to breaking developments.
- **Capital Allocation** - distributing funds across a growing list of companies.
- **Timing** - spotting the right moment to buy or sell, especially around new listings.

IMPORTANT GUIDELINES

Security

- Never share login credentials - results in immediate disqualification.
- Maintain a stable internet connection throughout the competition.
- Report technical issues to administrators immediately.

Strategy

- Balance risk and return across all available companies.
- Adapt as new stocks enter the market and conditions shift.
- Make decisions under time pressure following each update.
- Weigh unproven new listings against established companies.

POST-EVENT LEARNING

A comprehensive explanation document will follow the competition, covering the rationale behind each update, the real-world science behind it, and an analysis of winning strategies.

VICTORY CONDITIONS

Winner: The team with the highest asset value at the end of the competition .

Asset Calculation: $\text{Total Assets} = \text{Cash} + (\text{Shares} \times \text{Final stock Price})$, summed across all companies.
