

MALPIGHI'S MANIFESTATION

STUDY GUIDE

INGENIUM

INTRODUCTION

Delegates will dive into the world of pure sciences, where their understanding of chemistry, physics, and biology will be tested through challenges that demand sharp thinking, problem-solving, and creativity. Every round will count from how well they recall facts to how creatively they think their way out of a problem as only the most well-rounded scientists will make it to the top. Each stage will push them to apply scientific concepts in unexpected ways, blending knowledge with intuition as they compete to emerge as the true masters of Malpighi's Manifestation.

ROUND 1: CALIBRATION

Delegate Cap: 2

The first round will put your **core scientific knowledge** to the test. This round will require teams to make an important strategic decision: **when is it worth continuing with the difficult questions, and when is it better to move on and chase points elsewhere?** Teams will begin with a challenging written assessment covering **Physics, Chemistry, and Biology**. The questions will range from demanding applications of concepts to problems requiring careful scientific reasoning, so simply memorising information will not be enough.

However, the round will not end with the test alone. Teams will also have the opportunity to engage in rapid-fire science trivia, providing a faster-paced way to accumulate additional points. These trivia challenges will focus on quick thinking, scientific recall, and basic application across different areas of science.

Only the strongest performers will advance.

This is an elemination round.

ROUND 2: BATTLESHIP

Delegate Cap: 2

Get ready to take science to the battlefield.

In this round, teams will face off directly against another team in a scientific battle of questions, decisions, and precision. The battlefield will take the form of a Battleship-style challenge, where teams will attempt to locate and strike their opponents' hidden positions. But every move will depend on their ability to answer scientific questions correctly.

Questions will draw from the Pure Sciences and Mathematics, requiring teams to think quickly and communicate effectively under pressure. A correct answer could give your team the opportunity to attack. A successful strike could open the door to another attack. This round will test not only what your team knows, but also how effectively you can perform when another team is standing directly across the battlefield.

This is an elimination round.

ROUND 3: PHENOMENON X

Delegate Cap: 3

You can try to figure it out beforehand. We wouldn't recommend it.

Some things are better discovered than explained.
