

SADEQUAIN'S STUDIO

STUDY GUIDE

INGENIUM

ROUND 1 - ABSTRACT THE ATOM

Round duration: 4 hours

Teams will be given a **random STEM-based concept, phenomenon, problem, or discovery** and will transform it into a visual artwork. The concept may come from Physics, Biology, Chemistry, or other STEM fields

The artwork does not need to be a literal representation. Teams may use **abstract, symbolic, conceptual, or metaphorical interpretations** to communicate the assigned idea.

Possible prompts include:

- ☐ Theory of Relativity
- ☐ String Theory
- ☐ Observer Effect
- ☐ DNA
- ☐ Extinction
- ☐ Catalysts

Teams will create an artwork based on their assigned

The artwork should communicate the meaning, idea, or effect of the concept through visual elements rather than simply illustrating its scientific definition

Teams may use:

- ☐ Symbolism
- ☐ Metaphors
- ☐ Abstract forms
- ☐ Visual storytelling
- ☐ literal representation

Materials: A4 drawing sheets will be provided. Participants will use their own art materials.

Any medium except oil paints

Judging criteria:

- ☐ Scientific understanding
- ☐ Strength of interpretation
- ☐ Visual composition
- ☐ Craft and execution
- ☐ Pictionary bonus

Bonus: STEM Pictionary:

One member from each team will be randomly selected and given a **STEM-related object, concept, or idea** to draw. The selected member must communicate the prompt through drawing while their team attempts to guess it.

Rules:

- No writing or spelling the answer.
- No verbal clues.
- Teams must guess within the given time.
- Successful guesses will earn bonus point.

ROUND 2 - SPECTRA

Teams will transform a given STEM concept into a **short live theatrical performance**.

Each team will receive **three elements**:

1. STEM Concept

A scientific concept that must play an important role in the story

Examples:

- ☐ Artificial Intelligence
- ☐ Gravity
- ☐ Evolution
- ☐ DNA
- ☐ Time Travel

2. Situation

A setting or scenario in which the performance must take place.

Examples:

- Family Dinner
- Courtroom
- News Studio
- Classroom
- Hospital

Rules:

- No writing or spelling the answer.
- No verbal clues.
- Teams must guess within the given time.
- Successful guesses will earn bonus point.

3. Theatrical Restriction

A restriction that must be followed throughout the performance

Examples:

- One actor cannot speak.
- A specific word cannot be used.
- The entire scene must be performed in slow motion.
- One character cannot move.
- Actors cannot leave their positions

Teams must combine all three elements into **one coherent performance**, with the STEM concept being an important part of the actual story rather than simply being mentioned or explained.

Surprise STEM Twist:

teams will receive a **surprise STEM-related development** that they were not given beforehand.

Examples:

- "Gravity has disappeared."
- "One character is secretly an AI."
- "You have travelled 100 years into the future."
- "The oxygen level has suddenly dropped."

Teams must immediately incorporate the new development into their performance **without stopping, restarting, or breaking character.**

Rules:

- All three assigned elements must be incorporated.
- The STEM concept must directly influence the story or events.
- The theatrical restriction must be followed.
- The surprise twist must be incorporated immediately (bonus points).
- Teams may not stop or restart after receiving the twist.
- Performances must remain within the allotted time.

skit duration: 4-5 min

ROUND 3 - CINESTEM

Teams will create a **short film inspired by a given STEM concept**. The assigned concept will act as the core idea, metaphor, or mechanism shaping the story.

The film does not need to directly explain or scientifically demonstrate the concept. Instead, teams should explore how the idea can be translated into a human story involving themes such as **choices, relationships, identity, memory, loss, uncertainty, or perception**

For example:

STEM Concept: Superposition

A character experiences two possible versions of their life simultaneously, with each version developing differently based on a different choice they made.

Other possible concepts include:

- Time Dilation
- Parallel Universes
- Artificial Intelligence
- Genetic Mutation
- Evolution
- The Butterfly Effect
- Quantum Tunnelling
- Relativity
- Memory Storage
- Chaos Theory

Rules:

- The assigned STEM concept must be central to the film.
- The concept may be used literally, symbolically, or metaphorically.
- The film must have a clear narrative or central idea.
- Teams should focus on storytelling rather than explaining the science.
- The scientific concept should influence the characters, events, setting, or conflict.
- The film must be created and edited within the allotted time.

Format:

The film may take the form of:

- ☐ Short narrative film
- ☐ Psychological drama
- ☐ Thriller
- ☐ Science fiction
- ☐ Comedy
- ☐ Documentary-style film
- ☐ Experimental or abstract film

Judging Criteria:

Teams will be judged on:

- ☐ Creativity and originality
- ☐ Use of the STEM concept
- ☐ Storytelling and narrative
- ☐ Conceptual depth
- ☐ Visual communication
- ☐ Acting and direction
- ☐ Editing and production

Time:

Film Duration: 2-5 mins
