

SILICON 4D41

STUDY GUIDE

INGENIUM

INTRODUCTION

This event runs across three non-elimination rounds, with points accumulating throughout. Teams carry their scores forward rather than being knocked out. There is no delegate capacity in this category.

ROUND 1 - BOOT SEQUENCE (10% WEIGHTAGE)

A 40-question MCQ round covering CS theory, mathematical problem solving, application of math in CS, and everyday CS (10 questions each), pitched at O-level CS and general tech knowledge.

ROUND 2 - BROADCAST PROTOCOL

(20% WEIGHTAGE)

Teams will create a short video (3-5 minutes) on their research topic. Videos will be screened for fellow delegates, followed by a live Q&A with both the audience and judges.

Marking rubric:

- **50% – Explanation of topic:** Clarity, accuracy, and depth in how the concept is explained.
- **30% – Video presentation:** Production quality, visual engagement, pacing, and creativity in delivery.
- **20% – Q&A:** Team's ability to field questions from both judges and audience, testing genuine understanding beyond the scripted video.

Prep strategy: Since explanation quality carries the most weight, focus on making a complex CS/math concept easy to understand, think analogies, visuals, and storytelling.

ROUND 3 - FROM ZERO TO DEPLOY (75% WEIGHTAGE)

Hackathon Round. More details will be shared at the end of Round 2.
